The final project is same as the layouts in XD for both size of screen.

For making this project, I got the understandings of Banksy's art. During the process of typing HTML and CSS, this project helped me to learn a new knowledge related to CSS about scaling to the screen size of two viewpoints by using the @Media Query. It can use to use the same HTML in two different sizes.

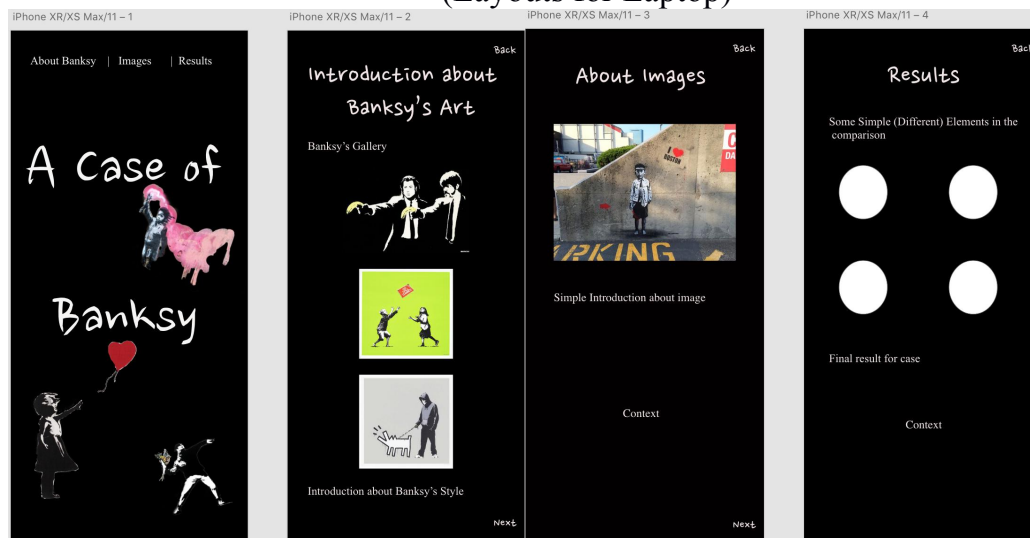

In the cover page, I putted many Banksy's art work to give a brief understanding to the readers about Banksy's art style. In the second pages, I introduced the Banksy's work with some samples. In the third page, I put the case images with some descriptions to help readers know about the image. And the final page included four elements which were the main traits of Banksy's art the results of the case based on comparing the similarities and differences between Banksy's artwork and image. On each page, I also put the "next" and "back" button to connect every page.

Finally, I learned that the layouts for designing same elements in two different screens will be different. It is a new designing experiences for me. The designers should know the spaces of various screen size to design the layouts for putting the important information.

-Layouts in XD

(Layouts for Laptop)

(Layouts for iPhone11)

It is my layout on the XD for the Banksy project. Most of the layouts in the XD are same as the rough sketches. I canceled the magnifying glass in the first page since this object does not relate to the topics and is looked stranger in the iPhone 11 size. Also, for the second page of introduce the Banksy's art, I tried to change the layout in the iPhone 11 since the iPhone 11 size is smaller than I imaged before and it will be crowded to put many images in the same line on the iPhone 11 size.

For the laptop layout, I changed the layout in the image page from vertical layout to the horizontal layout since horizontal layout will leave less spaces in the laptop comparing with vertical layout.

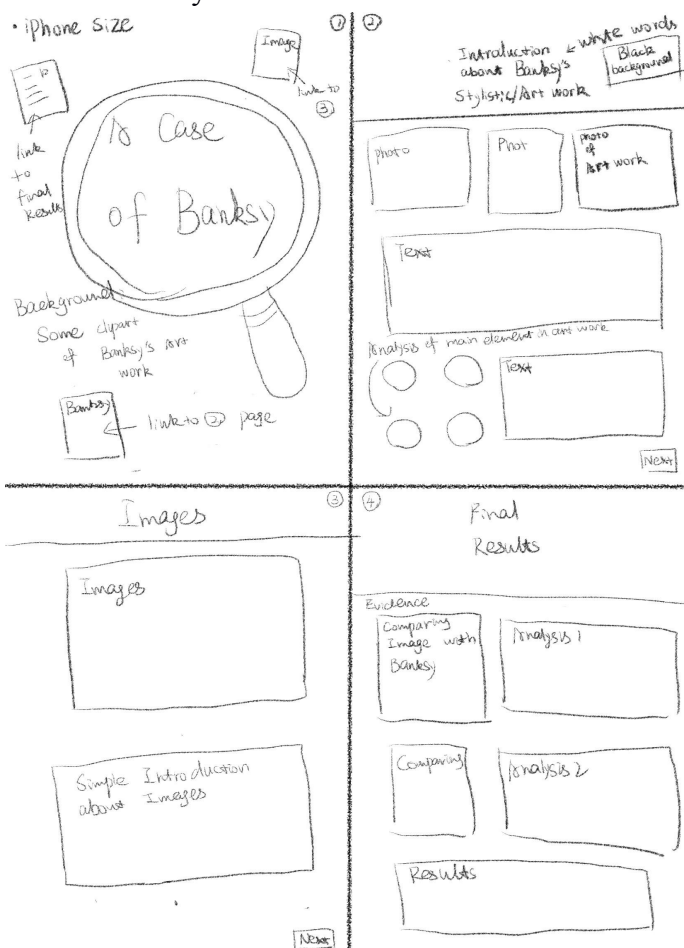

For both layouts, I changed the elements of Banksy from introduction page to the results page. By having these main elements of Banksy, the readers will be more easier to find the relations between the Banksy art and image. It will increase the credibility of the results by comparing the similarities between Banksy's artwork and image. The four elements in the result page also can provide a great summary to help readers review about the main traits of Banksy's art.

-Draft (rough sketches)

For this Banksy project, I used iPhone 11 size and laptop size to create it. Thus, I designed two types of pages to put the contents. And the layout for these two pages were different since the size for iPhone 11 is smaller than the size of laptop.

The first page was cover for the case of Banksy and I putted some art of Banksy to be related to the topic of Banksy. The art of Banksy in the first page also provided a simple view for readers to know about Banksy's art. Other pages' background were used by black with white fonts since the black colors were the theme colors in the Banksy's artwork.
